JUUKIFF Spiber

JUUKIFF will launch the WholeGarment knitwear made with Spiber yarn, in mid-February.

JUUKIFF has been exploring next-generation materials to develop its vision for regenerative fashion.
In this pursuit, the brand began working with Spiber Inc., the developer of Brewed Protein™ fiber, a protein-based material, in 2024.
Following its first collaboration for Spring Summer 2025, JUUKIFF continues its partnership with Spiber for the Spring Summer 2026 collection.
The upcoming collection features two pieces made with Spiber yarn: “STRING HOLTER TOP IN PROTEIN MIXED COTTON” and "SIDE SLIT SKORT IN PROTEIN MIXED COTTON."

The items will be released in mid-February through JUUKIFF’s official online store, with the exact launch date to be announced via Instagram. The items will also be available at select retailers in Japan, including Jurk (Tokyo) and Kiow (Hiroshima). JUUKIFF resonates deeply with Spiber’s circular approach and long-term vision for responsibility, and continues to explore ways to contribute to the creation of a circular ecosystem as part of its broader commitment to responsible fashion.
For this collection, the brand used a yarn blended from Brewed Protein™ fiber, known for its fine, smooth surface, and cotton. The yarn is intentionally left undyed to honor the material’s natural color. It features a natural texture that allows the intrinsic appeal of the materials to be appreciated as they are. The combination of protein-based fiber and cotton creates a soft, gently enveloping touch, delivering a relaxed and comfortable feel against the skin.

JUUKIFF

BRAND PROFILE

A STRUCTURED INTIMACY

JUUKIFF defines knitwear through the balance of structure and softness. Working closely with the human body, the brand shapes intimacy through controlled tension, layering, and exposure. Through precise lines and restrained bondage references, a reconstructed femininity emerges in silhouette, held in quiet sensuality.

DESIGNER PROFILE

Joomi Ha is a Seoul-born knitwear designer whose work centers on structure, intimacy, and the relationship between garment and body. She studied knitwear at Central Saint Martins in London and gained experience at BLESS, HELEN LAWRENCE, ROKH, and CELINE, before working at the Seoul-based brand TIME.

PURPOSEFUL DESIGN: RESPONSIBILITY

Material responsibility and ease of recycling are considered from the earliest stages of the design process, alongside a commitment to local production.

Through WHOLEGARMENT knitwear made from single materials, JUUKIFF simplifies recycling while allowing material decisions to shape the design from within.

Spiber

COPORATE PROFILE

Founded in 2007 and headquartered in Tsuruoka City, Yamagata Prefecture, Spiber Inc. is a biotechnology venture dedicated to developing innovative material solutions that address environmental challenges and contribute to sustainable well-being.

The company's Brewed Protein™ material platform utilizes precision fermentation technology, enabling the molecular-level design of materials tailored to specific applications. This approach offers strong potential for delivering sustainable, high-performance material solutions across a wide range of industries, including apparel, food, and automotive.

Through continued research and development, Spiber explores the diverse possibilities of Brewed Protein ™ materials with the aim of reducing environmental impact, advancing circularity, and supporting the creation of a more inclusive, equitable, and regenerative future.
